Greenberg CJ, Narang S. Open public health data discovery: Start with re3data.org [Poster 66]. Poster presented at: Vision: The future in focus. MLA 2020 Annual Meeting; 2020 July 27 – Aug 14; Portland, OR.

This Poster is brought to you for free and open access by the University Libraries at Rowan Digital Works. It has been accepted for inclusion in Libraries Scholarship by an authorized administrator of Rowan Digital Works. For more information, please contact brush@rowan.edu.

Background:

Open public health data consists of organized online data repositories assembled during or after public health investigations. There are enormous quantities of organized public health repository data emerging in a variety of academic, government, or non-commercial discipline or subject repositories.

A new registry of research data repositories, **re3data.org**, has the potential to improve the identification, access, and reuse of public health data, as well as promote best practices of data preservation and management. The intention of this investigation is to provide an introduction to effective use of **re3data.org** for access to shared open public health data.

Results:

The observations of the identified public health repositories were recorded with a shared Google Sheet, in order to facilitate and conduct observations of patterns and comparisons
